

ORPAT TRAILER

Loading and Securing Equipment

Place stairs in first and in the far left corner of the trailer (The driver's side). Attach the bungee cords to the black mount on the trailer and then to the stairs.

Place the five mats in the far right corner of the trailer. Place the simulated ditch (3 X 5 black mat) on top of the blue mats. Place the two wood pieces for the simulated hurdles on top of the mats.

Place the five black bars for the simulated wall and four blue handrails to the stairs in between the mats and the stairs.

Place the push/pull machine cover (blue) next to the stairs.

Place the orange cones next to the mats

Place the dummy drag body next to the cones.

Place the simulated tunnel next to the dummy drag body.

Place the weights and the white box containing the electronic components for the push pull machine under the simulated tunnel.

Place the toolbox next to the simulated tunnel.

Place the base to the push/pull machine in front of the cover and next to the tool box/tunnel.

Place the push/pull machine on top of the base.

Place the balance beam in last and in the middle of the trailer.
